

FPP Portal

Team Name: Corsair Cavaliers

Team Members:

Mark Batista - mbatista2@umassd.edu

Nathan Batista - nbatista1@umassd.edu

Elijah Gonzalez - egonzalez7@umassd.edu

Ethan Ramos - eramos5@umassd.edu

Executive Summary

We as a team put our heart and soul into the development of this application, as it served as two things. It served as one of our last assignments as seniors and as undergraduate students, and served as a way for us to use our knowledge for a great reason.

Being served with the responsibility to create such a challenging-sounding platform at first, had everyone in the group a little conflicted, but as we decided to anchor down and get our heads into the game, we saw a sprouting of ideas and creativity from each and every single one of our members. This project may be never used by the YMCA, or may be something the YMCA brings to service for the Full Plate Project, but regardless, we as a group made it our one and only goal to aim high at our fullest potential. This report will discuss some of the most important information pertaining to the team, the app, and any facet of the app's development.

To summarize, we discuss things like how the team holds ourselves to a standard of respect, teamwork, and honesty. We also discuss our deliverable Project Management work like our project scope, or the Gantt chart, which were measures taken to create a vision of tasks and time-spans for those tasks' completions. We then discuss some quality management plans, which displays our framework and a general plan moving ahead into the project. We go over some near end-of-project documentations like the Closure Checklist or the Test Plans / Test Results, which are just some procedural measures in Project Management to make sure there weren't any oversights. We show some documentation before the beginning of the User Manual, such as DSC, UCD and ERD, which are graphic solutions that are used to display some of the finer details of project flow, design and more.

Lastly, the User Interface was designed and fine-tuned for the sake of easy understanding and intuition, so our User Manual was designed in the same fashion, with plenty of information regarding flow, layout and simplicity. In its design we used plenty of screenshots within the app, so that users can easily adjust themselves from any point within the app.

We appreciate the opportunity provided to us via Professor Rui Huang, and to those involved in the Full Plate Project at the YMCA. We sincerely hope that this application will offer even a sliver of the significance it held for our team to those who use it.

Thank you from Team Corsair Cavaliers:

Nathan Batista, Mark Batista, Ethan Ramos, and Elijah Gonzalez

Skills & Knowledge Inventory:

Mark:

- SQL / Access
- PowerApps / PowerBI
- Database Knowledge
- C / Python

Nathan:

- SQL coding
- Familiar with database creation
- Excel
- C/Python

Elijah:

- Power Apps
- Github codespace / pantheon
- Excel

Ethan:

- Excel/SQL/Access
- Power Apps
- C/Python

Roles & Responsibilities:

Mark:

- Team Communicator
- UI/UX Development

Nathan:

- SMS Researcher
- Database Development

Elijah:

- Quality Assurance in Integration
- Interface Control Programming

Ethan:

- Group Secretary (Meeting Minutes and Meeting Times)
- Database Development

Agreed Upon Meeting Times:

- Virtual; After 6pm Monday
- Virtual; 11am Thursday

Agreed Upon Meeting Location(s):

- Library if necessary
- Virtual

Team Communication:

- Text messaging
- Zoom
- FaceTime

Team Goal

To work together to create a program to replace the YMCA's current database system. We did strive to achieve a high grade for this project.

Set of Team Values

We all put forth our best effort in working on this project together to help meet the YMCA's needs. We communicated clearly and often to ensure we are working smoothly together.

Code of Ethics

- No usage of AI
- Ensure to create original work
- Treat teammates with respect at all points

Project Summary

For a summary, this project is a quest to develop a solution for the YMCA South-Coast's own "Full Plate Project". This project is a food supply to members of the South-Coast area of Massachusetts that are less fortunate. Currently, YMCA South-Coast uses a combination of bosWell and SignUpGenius softwares to manage and record information regarding the project and its events. YMCA South Coast requires a cheaper solution that can efficiently fulfill the same tasks that were completed using the solution being used prior.

We, the students, were asked to configure an application that could serve the YMCA South Coast division in whatever manner the teams saw fit, but the app has to be made operational while minimizing total cost, or even free.. The students would complete weekly tasks and follow their own schedule that would be formed from Microsoft Project, a project management application they would learn about. For specific boxes to fill regarding the project, students were asked to develop a system that can:

- Intake demographics regarding the market participants
- Carry out text messages to market participants
- Optionally create a function that can make monthly marketing analyses and reports.

Project Description:

We made an application that uses Microsoft systems such as Excel, Outlook, and PowerApps . This app can track, catalog, and organize the contact information that gets inputted and recorded into the application. An Excel sheet is used to group people by family and by giving each household a personalized ID number. Outlook will be used to contact the volunteers and recipients. Lastly, PowerApps was used to create the app, upon creation, we planned on programming it to have a set of forms for the volunteers to offer to clients for the sake of gathering information. Once the information is gathered it gets transferred to an Excel sheet and YMCA would be able to track who is getting the food, along with associated logistics and statistics.

Measurable Organizational Value:

Overall, we made a scale for which areas are most important, starting with Strategies, Customers, Operations, and Social Factors being the most important and Financials being the least important out of the lot. YMCA wants to see growth in their system because they are valuing their clients by wanting to gather customer data and manage messaging and emails from them. They value a system that is better, faster, and more cost-effective so that they can increase productivity compared to the year before. We intend to have a 10 to 20 percent increase in outreach and distribution of food, measured by the ratio of messages sent to event attendance, which would increase operations and funding for the project. We created charts and diagrams that define the high-level functionalities that we intend to incorporate into our system. The main

functionalities we set out to include are database management, SMS messaging to users, and food collection signup. These visual representations are what helped us begin our task management in MS Project where we plan out the project schedule. Once we set up the schedule, we link tasks and set costs for better representation of our task management. As we worked on the app we had come across tribulations but as we concluded the project, we put into high gear to try to get a functional version for the April 22nd presentation.

Scope:

Goals & Deliverables:

- Our goal was to create an app that tracks user interaction with the YMCA
- We needed a staff, recipient, and volunteer login.
- A visible database for staff to understand and work with
- A tracking system to account for families who are receiving food
- A messaging system that allows for SMS updates to those who apply

Tasks & Activities:

- We worked on each slide with care to give a user friendly experience while trying to accomplish the each goal we set out for
- We met in class and online and worked on our project and documents to maintain the level of quality we desired
- We also did a lot of research to see what would work best in our app on both technical and visual fronts because we wanted to give customers an understandable and enjoyable experience

Deadlines & Milestones:

- The project deadline was 4/22/25, some important milestones we came across are
 - Brainstorming Process 1/31/25
 - Planning Process 3/1/25
 - Design Process 3/21/25
 - Execution Process 4/18/25
 - Quality Management / System Configuration 3/25/25 - 4/18/25
 - Implementation Process 4/19/25
 - Evaluation Process 4/24/25

Quality Objectives:

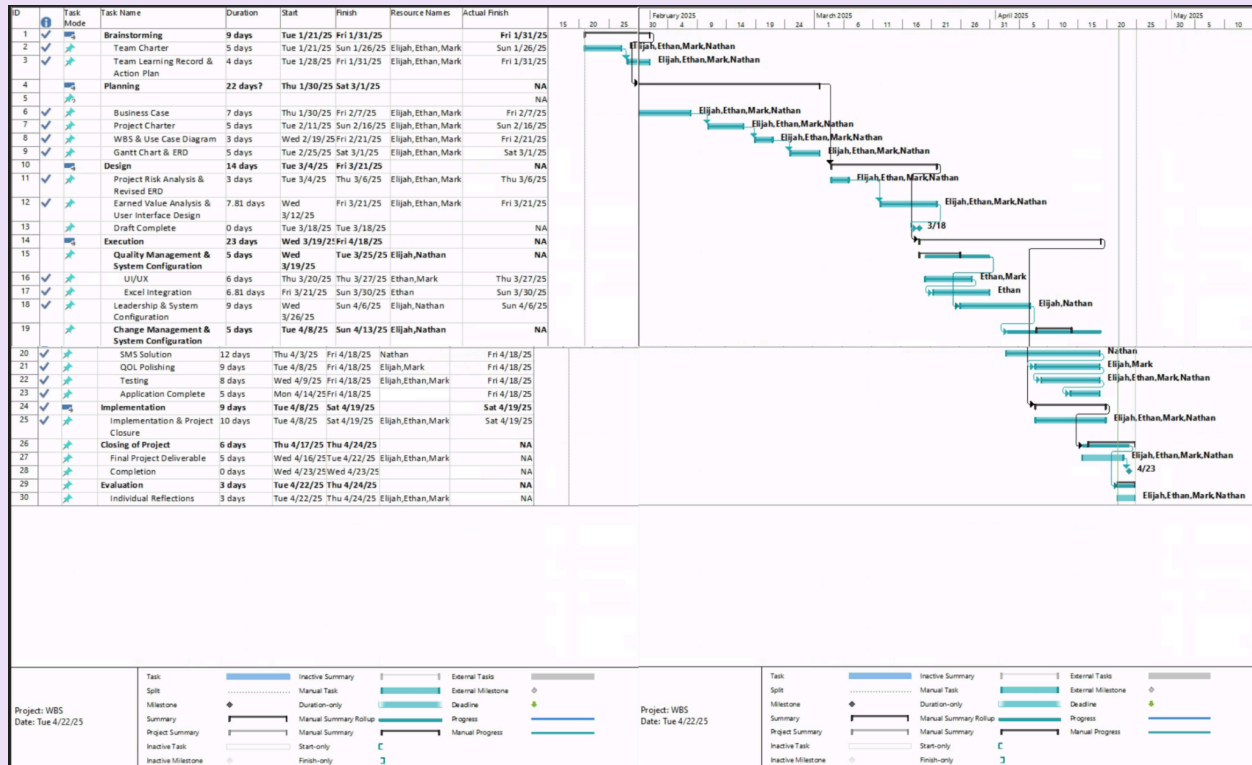

- Adhere to a low-cost approach
- Ensure YMCA satisfaction with well developed completed application
- Create a well performing and seamless application

- Ensure timely completion of our application as well as any other needed documentation

Resources & Budget:

- We tried our best to make this software free, therefore the only resource needed is a Microsoft Office 365 subscription, that includes MS Excel, MS PowerApps, MS Power Automate, etc.

Gantt Chart:

Quality Management Plan:

To ensure the quality of the delivered system our team would constantly verify application function as well as consultation on different system features as we built the app. Quality of the system was also assessed through finalized function testing each week as we worked on deliverables.

Process Metrics:

- Weekly deadlines ensuring on time development

- Being able to efficiently resolve issues within the system at a reasonable pace
- Design Consistency
 - Ensure design consistency by constantly consulting team members
 - Adhere to same design principles
- Team collaboration

Product Metrics:

- Ease of Use Oriented Design
- A solid amount of features
 - Avoiding over/undershooting the amount of features and ensuring they're quality features
- Simplistic Design Philosophy

Project Metrics:

- Measure time spent on reworking design
 - Ensure we are not behind schedule
- Schedule completion monitoring
 - By keeping track of our due dates the team verifies that weekly objectives are clearly being met
- Customer Satisfaction
 - The YMCA will provide us with feedback regarding the quality of our project and its ability to meet their needs.

Verification Activities:

- Verify every button / link works
- Verify code is up to date
- Verify SMS section is functioning
- Verify the information is properly being processed in the right paths
- Verify the processed information is linked to a database (excel, sheet, etc)
- Verify the information is consistent to the customers (YMCA) needs

Validation Activities:

- Finalization of the visual aspect of the system, everything looks professional
- Finalization of the coding aspect of the system, internally everything is functioning as intended
- Finalization of the information aspect of the system, information is being processed based on customer (YMCA) needs

Project Evaluation:

The project partly achieved its MOV, within the time constraints we tried to get a fully functioning app but due to our limitations and the project's limitations, it remains incomplete. The feedback was positive so we believe that the sponsor is going to be satisfied. We put a lot of effort into this project and believe that it was managed to the best of our abilities, we relied heavily on teamwork and acted very professional and ethically when it came to meet ups and actual work performance. Everything seemed to go smoothly but due to our limitations and mishappenings, we just could not close the project with a complete finished product. We believe we accomplished a lot; we got information from slides to the data sheets, we have a visual representation of the data sheet within the app for staff, we implemented volunteer, staff, and recipient login functions. We have yet to make a +1 count to the recipient login, we rearranged the volunteer section because we could not figure out the event system in time, text messaging is partly functional but it is very unreliable, and we had issues updating the databases because of the datasource we were using. Next time, we could do more research on the application we intend to use and whether the functions we want to implement would work with the app. We would also consider starting with a SharePoint sheet rather than an Excel Sheet because it has better functionality and less limitations with PowerApps. Overall, we put a lot of effort into the application and while we got very close to a finished product yet did not get to what we were reaching for.

Conversion strategy:

A direct cutover makes the most sense compared to the alternatives given. Since the YMCA is looking for a better and free sms delivery system a direct cutover would help eliminate the costs they're currently paying for. A direct cutover would be very easy as all that would need to be done is link the current database to our system and format it to fit the system design.

A parallel cutover would only complicate operations down at the YMCA. There would be two different systems working at once and could potentially double data entries corrupting data integrity.

A phased cutover is the next best conversion strategy as it would allow the YMCA and ourselves to iron out inconsistencies within the system. The only caveat with this conversion strategy is the fact that the YMCA could still be paying for their old system while testing our own system.

Closure Checklist:

- Ensure the application is complete and working
- Ensure the YMCA has accepted the project
- Organize and archive all deliverables
- Re-evaluate MOV to ensure nothing else can be done to improve system

Test plans and test results:

All testing was mainly associated with powerapps, power automate, excel, and their ability to work with each other. All testing through Power automate included our sms flow, staff & recipient flow, and our food pickup counter flow. To test these flows, UI was created in powerapps with variables used from an excel sheet. User inputted information would be taken as an input for power automate flows and testing would reveal errors in the flows. Power automate notifies users if their flows don't run properly, so this is how the group would debug any errors when utilizing power automate.

Further testing was done right in powerapps itself. Powerapps utilizes a low-code environment which allows for seamless error debugging. Any coding done within powerapps automatically reveals any errors made within the code. As an example, the "patch()" function in powerapps allows for modifying any source data that may be connected. Whenever there were any errors powerapps would notify us as any other coding platform would. From here, debugging was very simple as connected literature to certain problems would be linked to any errors made allowing for reduced research time and simple debugging methods.

Outstanding issues;

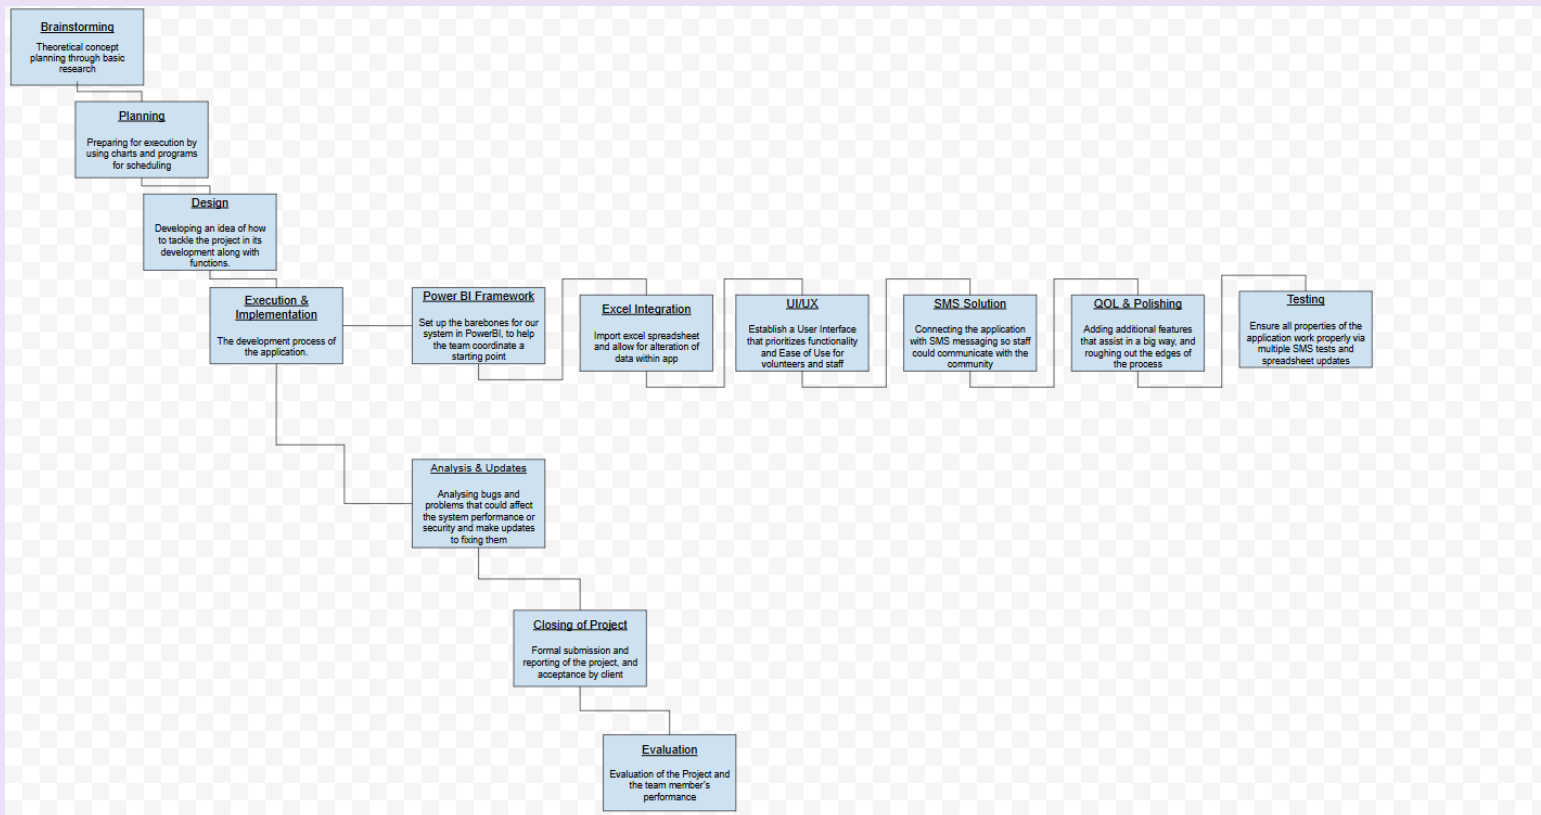

Currently there are only three issues with the "FPP Portal" application. For starters, we wanted to utilize a free sms delivery system, reducing any cost on the YMCA's end. In order to do so we decided to attempt an approach with the "Send Email Through Outlook (V2)" feature in powerapps. Unfortunately, when trying to filter which messages are sent where, there are some fallouts in functionality. When sending a text through this system, our tests revealed that the delivery of sms messages may not be sent or are sent at a delayed time. Also concluded from testing is the fact that certain cell providers may receive messages faster, slower, or not at all.

Another issue with the "FPP Portal" is that powerapps and excel do not have the best interoperability in terms of functionality. As mentioned before a "patch()" function was used in our application. There have been issues that have stonewalled the group as sometimes writing from powerapps to excel would generate an error "unable to write to source". With further research, we've learned that sharepoint has better interoperability with powerapps compared to excel. Changing from an excel base to sharepoint is very easy. Sharepoint allows importing from excel so any data exchange is fairly simple.

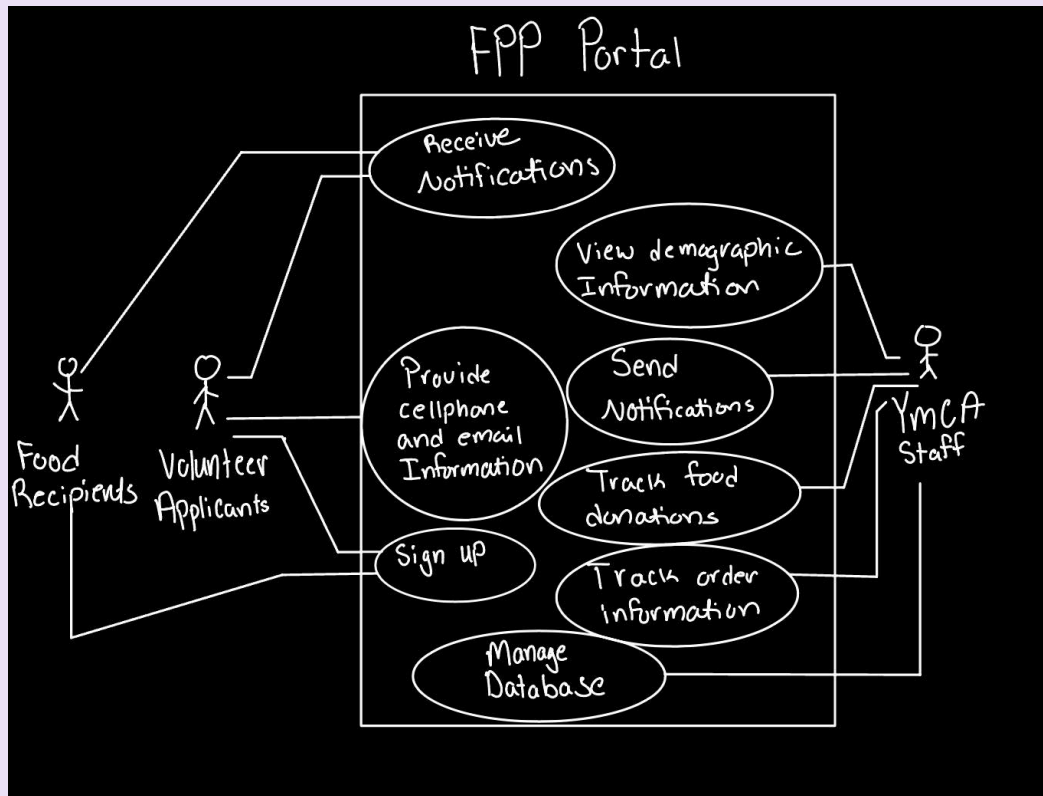

Lastly, our "Existing Recipient Login Field" screen has limited functionality. The group tried to take a power automate approach to automatically +1 recipient visits. However, as stated before excel and powerapps do have problems writing to a source as sometimes the same aforementioned error would appear.

User Interface Design:

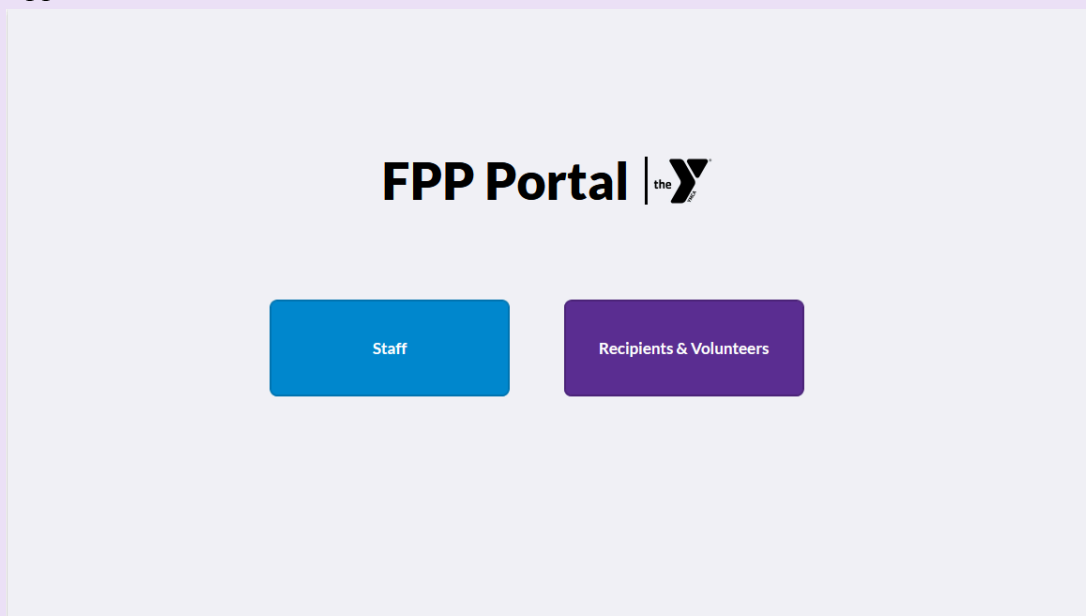

The top screenshot, titled "Recipient Navigation", features a home icon and a back arrow on the left, and the "the Y" logo on the right. In the center, there are two purple buttons: "New Recipient" and "Existing Recipient".

The bottom screenshot is split into two sections. The left section, "Existing Recipient Login", includes a home icon and a back arrow. It contains a form with the following fields: "ID Number" (text input), "Adults" (dropdown with value 1), "Children" (dropdown with value 1), "Elderly" (dropdown with value 1), and "Veterans" (dropdown with value 1). A purple "Login" button is at the bottom. The right section, "New Recipient Registration", includes the "the Y" logo and a home icon. It contains a form with the following fields: "Last Name" (text input), "Email" (text input), "Home Address" (text input), "City" (text input), "Zip & State" (split into "Zip Code" and "State" inputs), a "Family Details" section with "Number of Adults" (dropdown), "Number of Children" (dropdown), "Number of Elderly" (dropdown), and "Number of Veterans" (dropdown), and "Phone Number & Provider" (split into "Phone Number" and "Cell Provider" inputs). A purple "Submit" button is at the bottom.

User Manual

The app is made with simplicity and intuition as the focal point of the application. This user manual will be broken into PowerApps, both Staff and Recipients sections, and Excel, and interactions between the two will be mentioned as they arise.

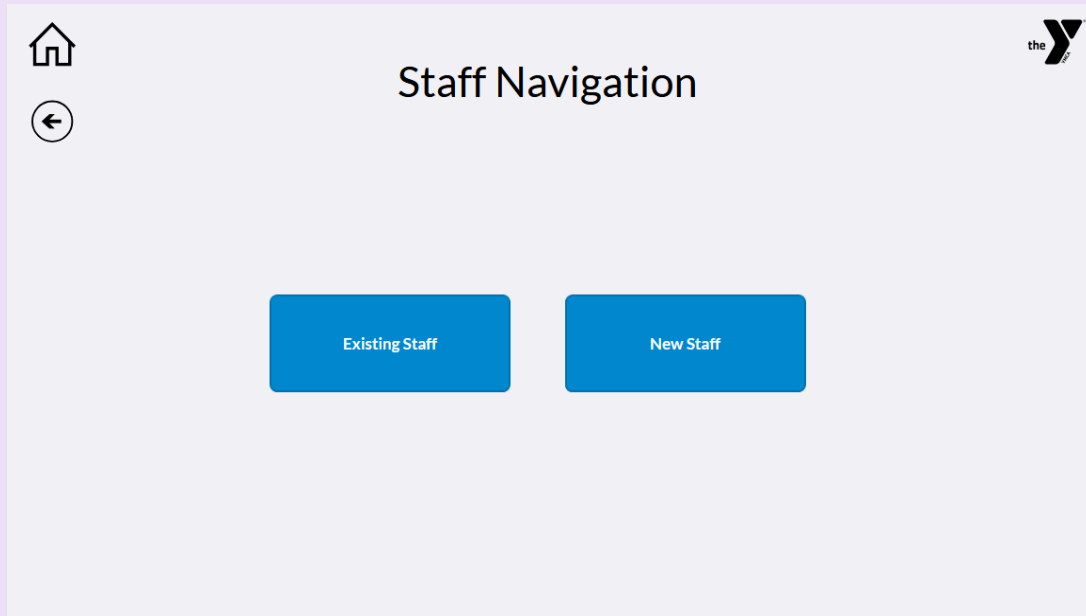

PowerApps

Home Screen

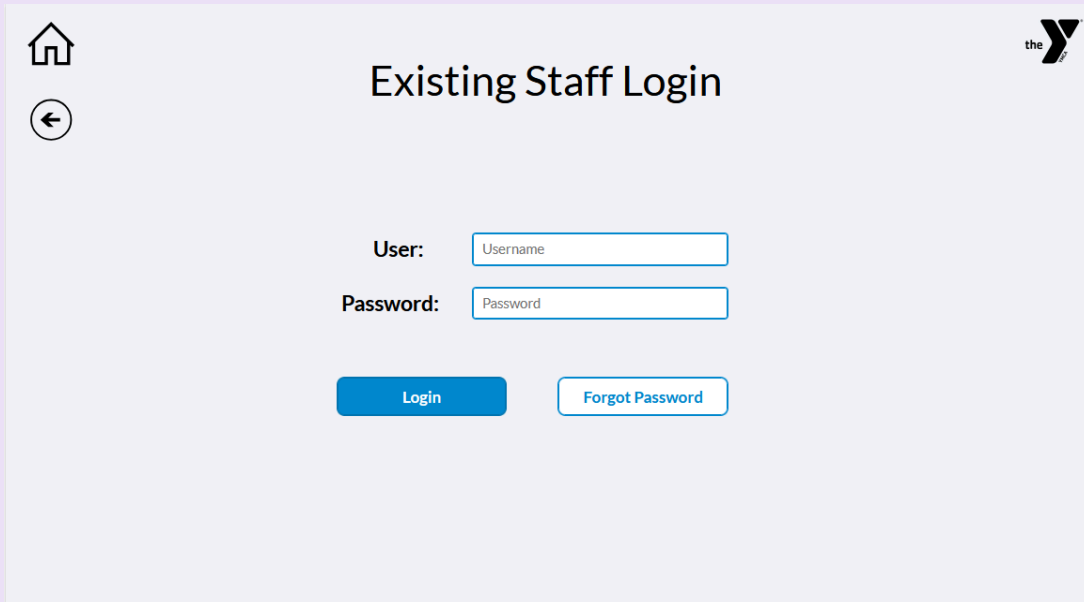

The home screen serves as our gateway to the different capabilities of the FPP Portal app. The “*Staff*” button navigates to the “*Staff Navigation*” page. The “*Recipients & Volunteers*” button brings the app to the “*Recipient Navigation*” screen.

PowerApps - Staff

Staff Navigation

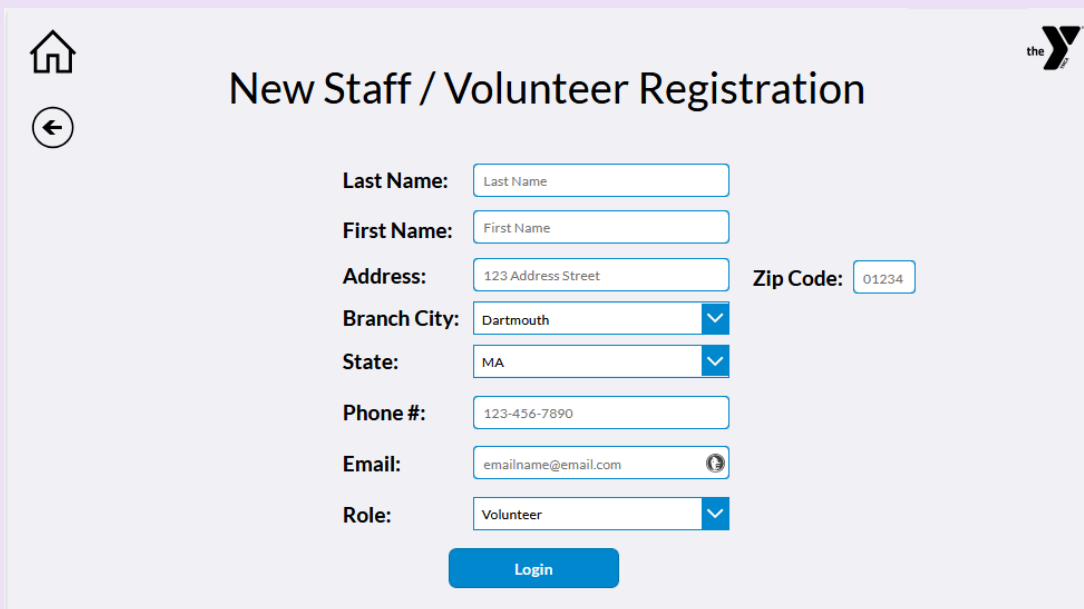

This screen is accessed through the “Staff” button in the “Home” screen. The “*Staff Navigation*” screen is a branching off between pages “*Existing Staff*” and “*New Staff*” depending on the current user.

The screenshot shows the 'Existing Staff Login' interface. It features a home icon and a back arrow in the top left, and the 'the Y' logo in the top right. The title 'Existing Staff Login' is centered at the top. Below the title, there are two input fields: 'User:' with a placeholder 'Username' and 'Password:' with a placeholder 'Password'. At the bottom, there are two buttons: a blue 'Login' button and a white 'Forgot Password' button with a blue border.

Existing Staff

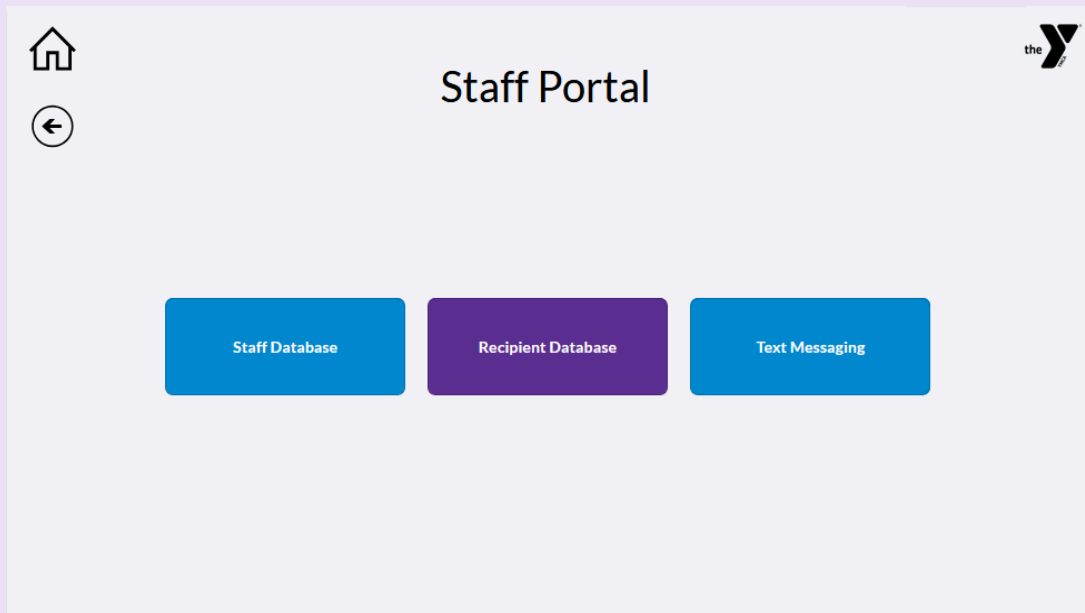

This screen is accessed through the *“Existing Staff”* button in the *“Staff Navigation”* screen. The *“Existing Staff”* screen brings us to a login screen that takes an input of a Username and Password which are stored within the Excel database, and must be added by an administrator of the Full Plate Project. The User and Password strings can be found within the *“Login Details”* sheet under the *“UserName”* and *“Password”* columns within the *“UserPass”* table.

The screenshot shows the 'New Staff / Volunteer Registration' interface. It features a home icon and a back arrow in the top left, and the 'the Y' logo in the top right. The title 'New Staff / Volunteer Registration' is centered at the top. Below the title, there are several input fields and dropdown menus: 'Last Name:' (placeholder 'Last Name'), 'First Name:' (placeholder 'First Name'), 'Address:' (placeholder '123 Address Street'), 'Zip Code:' (placeholder '01234'), 'Branch City:' (dropdown menu with 'Dartmouth' selected), 'State:' (dropdown menu with 'MA' selected), 'Phone #:' (placeholder '123-456-7890'), 'Email:' (placeholder 'emailname@email.com' with an '@' icon), and 'Role:' (dropdown menu with 'Volunteer' selected). At the bottom, there is a blue 'Login' button.

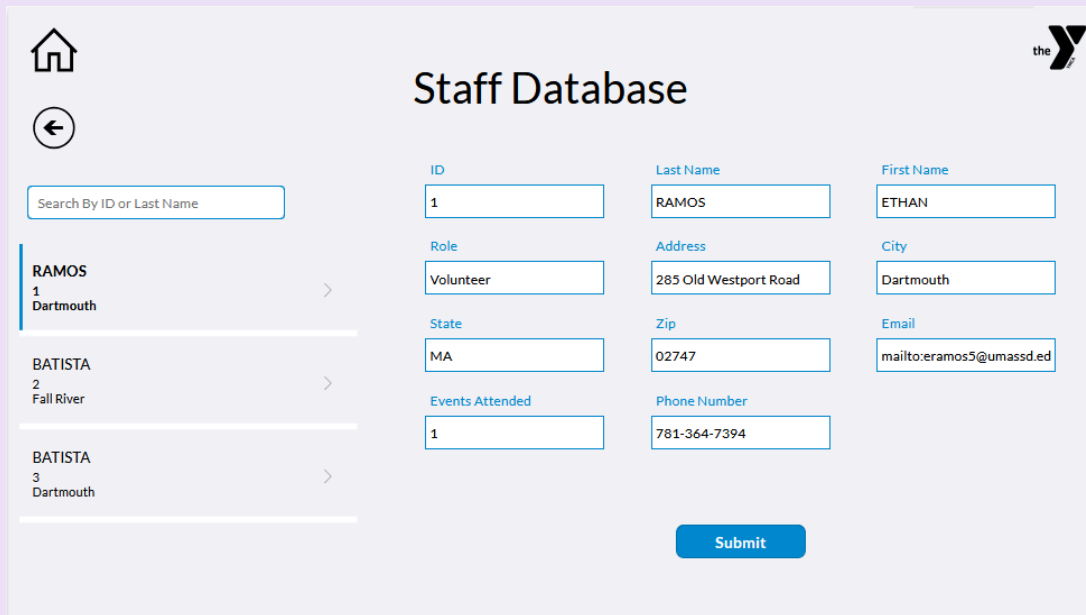

New Staff

This screen is accessed through the *“New Staff”* button in the *“Staff Navigation”* screen. The *“New Staff”* screen is a form that the user would fill out if they are first-time volunteers and/or staff. The screen takes several information regarding the desired signee and records the supplied data to the Excel database.

Staff Portal

This screen is accessed through the *“Login”* button in the *“Existing Staff”* screen. The *“Staff Portal”* screen is a navigation screen that brings the user to different data-sensitive or advanced-permissioned screens. There are three buttons, *“Staff Database”*, *“Recipient Database”* or *“Text Messaging”*.

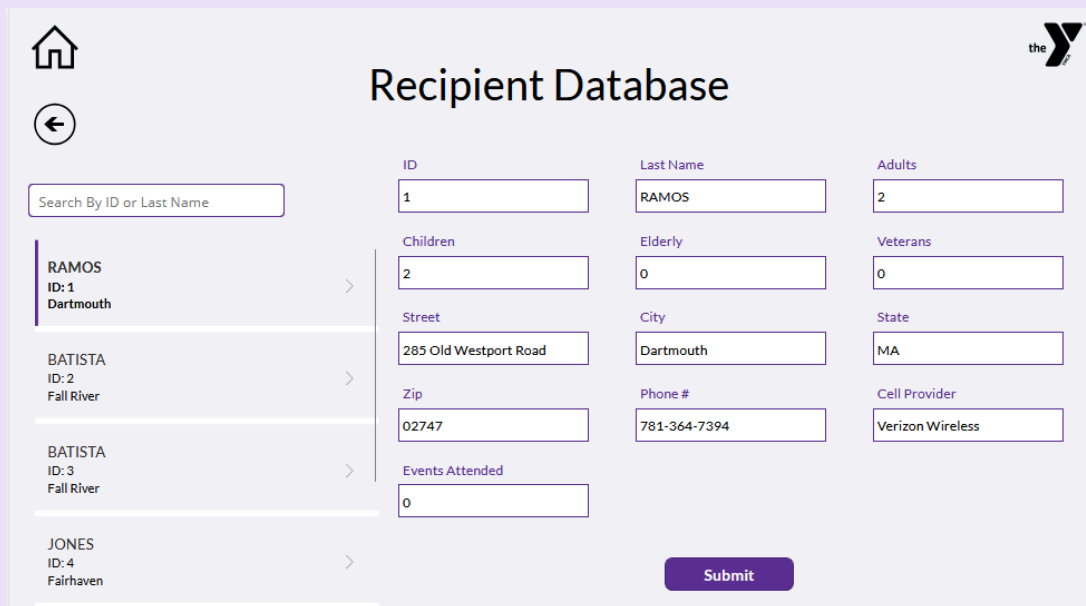

The Staff Database form features a sidebar on the left with a home icon, a back arrow, and a search bar labeled "Search By ID or Last Name". Below the search bar is a list of staff members: RAMOS (ID: 1, Dartmouth), BATISTA (ID: 2, Fall River), and BATISTA (ID: 3, Dartmouth). The main form area contains fields for ID, Last Name, First Name, Role, Address, City, State, Zip, Email, Events Attended, and Phone Number. A blue "Submit" button is located at the bottom right.

ID	Last Name	First Name	Role	Address	City	State	Zip	Email	Events Attended	Phone Number
1	RAMOS	ETHAN	Volunteer	285 Old Westport Road	Dartmouth	MA	02747	mailto:eramos5@umassd.edu	1	781-364-7394

Staff Database

This screen is accessed through the “*Staff Database*” button in the “*Staff Portal*” screen. The “*Staff Database*” screen shows the user details of the Staff sheet of the Excel database, where the user can search by scrolling on the left-side gallery, or search with the search bar above, by ID (“*ID*” column of Excel “*Staff*” sheet) or by Last Name (“*LastName*” column of Excel “*Staff*” sheet).

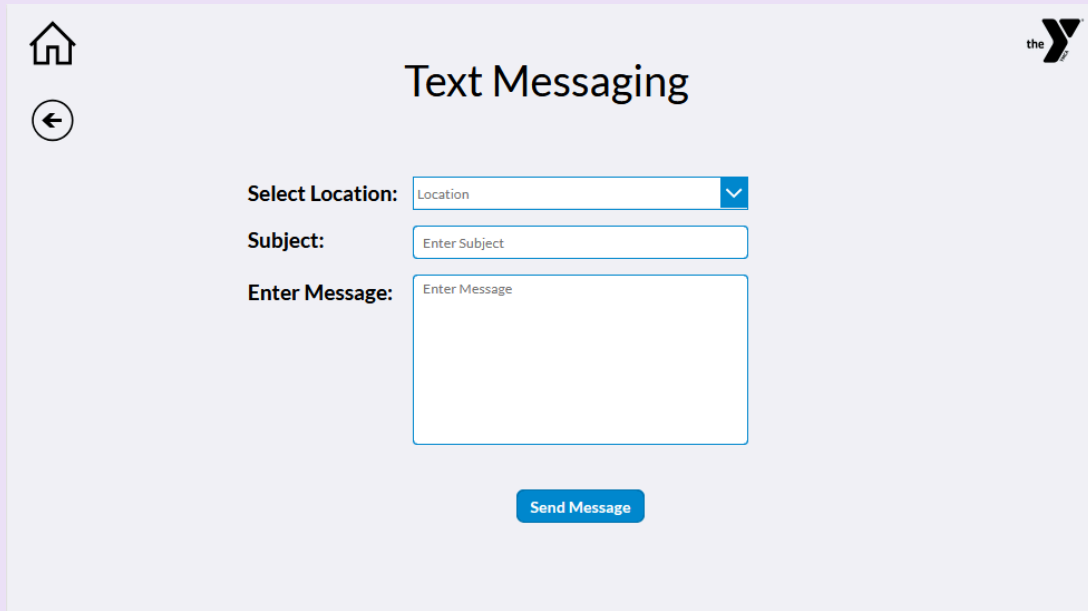

The Recipient Database form features a sidebar on the left with a home icon, a back arrow, and a search bar labeled "Search By ID or Last Name". Below the search bar is a list of recipients: RAMOS (ID: 1, Dartmouth), BATISTA (ID: 2, Fall River), BATISTA (ID: 3, Fall River), and JONES (ID: 4, Fairhaven). The main form area contains fields for ID, Last Name, Adults, Children, Elderly, Veterans, Street, City, State, Zip, Phone #, Cell Provider, and Events Attended. A purple "Submit" button is located at the bottom right.

ID	Last Name	Adults	Children	Elderly	Veterans	Street	City	State	Zip	Phone #	Cell Provider	Events Attended
1	RAMOS	2	2	0	0	285 Old Westport Road	Dartmouth	MA	02747	781-364-7394	Verizon Wireless	0

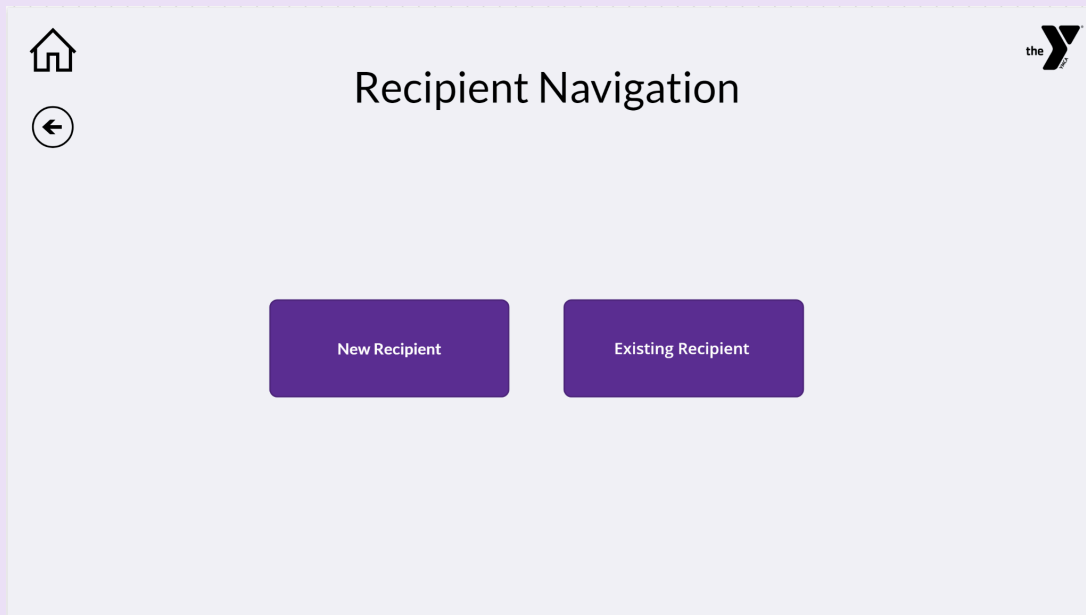

Recipient Database

This screen is accessed through the *“Recipient Database”* button in the *“Staff Portal”* screen. The *“Recipient Database”* screen displays a similar database to that of the *“Staff Database”*, but with contents from the *“Recipients”* sheet of the Excel database. You can similarly search with scrolling, or searching either ID or Last Name (*“ID”* column and *“LastName”* column).

The screenshot shows a web interface titled "Text Messaging". In the top left corner, there are two icons: a house icon and a circular arrow icon. In the top right corner, there is a logo for "the Y". The main content area contains three input fields: "Select Location:" with a dropdown menu showing "Location", "Subject:" with a text input field containing "Enter Subject", and "Enter Message:" with a larger text input field containing "Enter Message". Below these fields is a blue button labeled "Send Message".

Text Messaging

The *“Text Messaging”* screen can be accessed through the *“Text Messaging”* button on the *“Staff Portal”* screen. This screen displays the location for which the text message will be sent to which correlates to the selected location chosen by volunteers and recipients. There is also a subject line as well as the message field. Pressing the *“Send Message”* button will send a text to the correlating branches chosen.

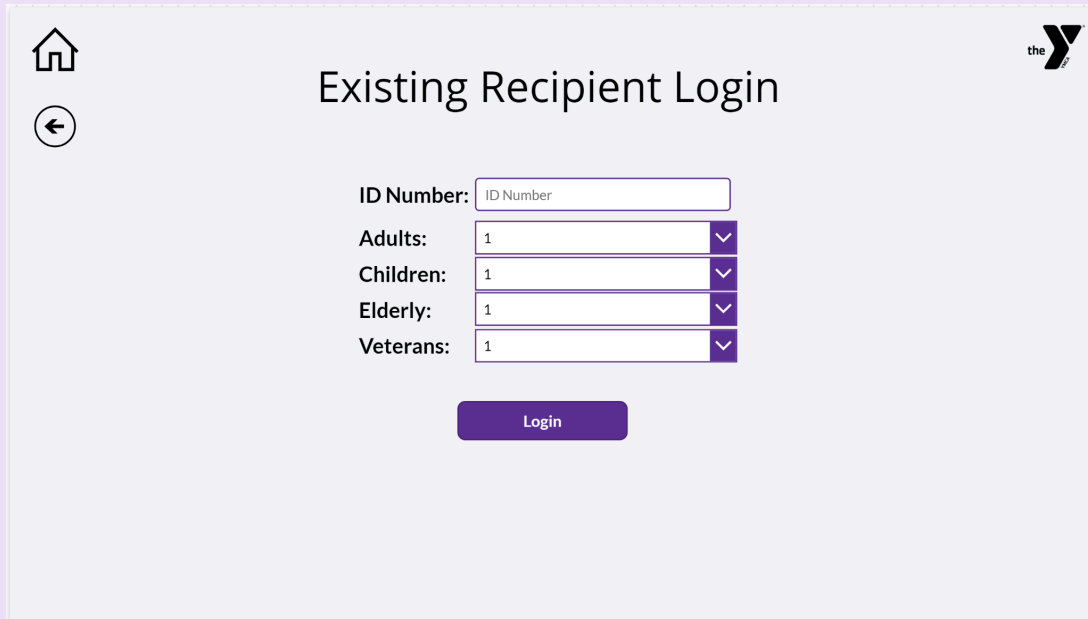

Recipient Navigation

The “*Recipient Navigation*” screen can be reached by pressing the “*Recipients and Volunteers*” button on the home page. From here, there are two options: “*New Recipient*” and “*Existing Recipient*”. During markets, if the recipient you’re interacting with has been to a previous market and remembers their ID number, you can press the “*Existing Recipient*” button, and follow the instructions below for that screen. For new recipients, you can press the “*New Recipient*” button and then follow the instructions below.

The screenshot shows a mobile application interface titled "New Recipient Registration". In the top left corner, there are two icons: a house icon and a circular arrow icon. In the top right corner, there is a logo for "the Y". The form contains several input fields: "Last Name:" with a text box labeled "Last Name", "Email:" with a text box labeled "Email Address", "Home Address:" with a text box labeled "Home Address", "City:" with a text box labeled "City", "Zip & State:" with two text boxes labeled "Zip Code" and "State", and "Phone Number & Provider:" with two text boxes labeled "Phone Number" and "Cell Provider". Below the address fields, there is a section titled "Family Details" with four rows: "Number of Adults:" with a text box labeled "# of Adults", "Number of Children:" with a text box labeled "# of Children", "Number of Elderly:" with a text box labeled "# of Elderly", and "Number of Veteran:" with a text box labeled "# of Veterans". At the bottom of the form, there is a large purple button labeled "Submit".

New Recipient Registration

The “*New Recipient Registration*” screen can be reached by pressing the “*New Recipient*” button on the “*Recipient Navigation*” screen. From here there are several fields where a user can enter the correlated information.

The screenshot shows the "Existing Recipient Login" screen. It features a home icon and a back arrow in the top left corner, and the "the Y" logo in the top right. The title "Existing Recipient Login" is centered at the top. Below the title, there are four input fields with labels: "ID Number:", "Adults:", "Children:", "Elderly:", and "Veterans:". Each field has a dropdown arrow on the right. The "ID Number" field is currently empty, while the others show the number "1". At the bottom center, there is a purple "Login" button.

Existing Recipient Login

The “*Existing Recipient Login*” screen can be accessed through the “*Existing Recipient*” button on the “*Recipient Navigation screen*”. On this screen the recipient enters their ID number as well as how many meals they’re picking up for each respective field shown above.

Microsoft Excel Sheet

Recipient Table

The “**Recipient**” table provides the information entered within the PowerApps application. Any entered information will automatically be updated within the Excel sheet. Since Excel is a standard Microsoft 365 application it is very easy to access.

Login Details Table

The “**Login Details**” table provides the login information for staff, volunteers, and recipients. It holds the user's ID, user name, password, and emails for each individual user.

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	ID	LastName	FirstName	Address	City	State	ZIP	Email	PhoneNumber	Provider	EmailPhone	Role	_PowerAppsid_

Staff Table

The “Staff” Table provides the users other information such as location, home address, phone number, email, and cell provider. This table helps staff track customer information but also has formulas that enable the text messaging function in the app.

	Carrier	Email Format	Power	D
80	US Cellular	number@email.uscc.net	51a03d0 5-f462-4c be-937b-f 4f95fe13 afb	
81	USA Mobility	number@usamobility.net	dabcbbe5 -4352-42 6e-be26- 7212824 b9439	
82	Verizon Wireless	number@vtext.com	e565cd7f -1855-49 69-9f4b-f 32a36c89 8ed	
83			2523879 2-0d0d-4	

Cell Provider List

The “Cell Provider Master List” sheet’s table content is imported from a github repository. The “Cell Provider List” table allows for the concatenation of phone numbers and email addresses located in any respective sheet including that information.

Maintenance Documentation:

Maintenance is mostly adjusted via MS Excel. If any information needs to be added or deleted outside of new users, you would have to find the information through the excel sheet and update it manually. The best way to go about this in a transactional setting, is to have the Excel sheet running on a device and filter the customers information through Excel. If YMCA decides to change to a different spreadsheet application such as Sharepoint, the data resource in MS PowerApps would need to be changed and information transferred would need to be identical for the transition to be seamless. If not the system might get confused and the entire excel sheet and

app would have to be adjusted. For simple updates use Excel, we hoped that in a later version adjusting database information would be implemented directly into the app.
